

## REGULATED POLYMERASE III EXPRESSION SYSTEMS AND RELATED METHODS

5    Abstract

          The invention provides, among other things, regulated polymerase III expression systems and related compositions. The invention provides, in part, expression systems in which the expression is inducible, and systems which express inhibitory RNA molecules, such as hairpin RNA molecules. The invention also provides  
10   related methods, such as methods of inhibiting expression of a gene.
